

King County Housing

Dr. Suhmi Hwang

 **Client: Nicole Johnson (Buyer)**

„Looking for a Lively, central neighborhood in the middle price range with right timing within a year”

: Assumptions/Hypotheses

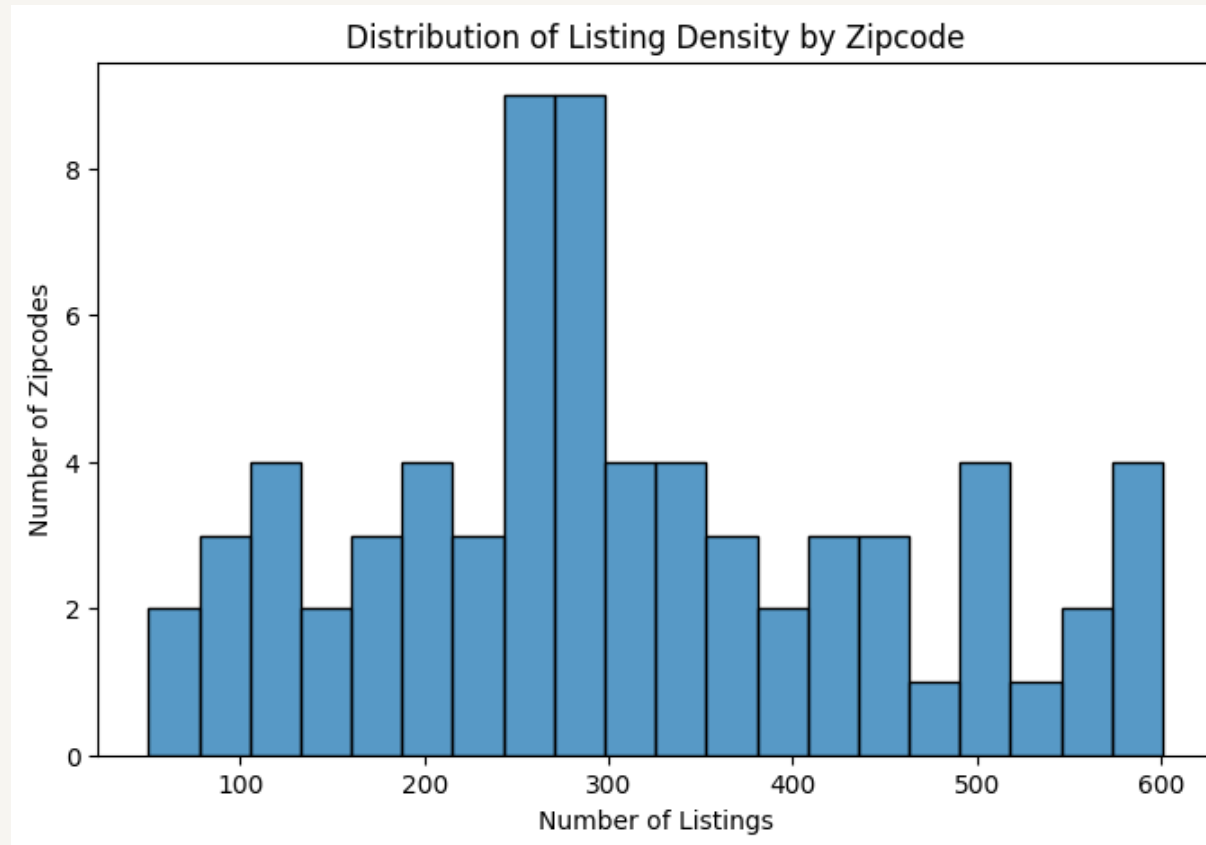

1. Lively neighborhood
→ Higher the house density is, higher the price will be
2. Central neighborhood: Proximity to central areas of King county
→ Closer it is to central areas, higher the price will be
3. Right timing within a year: Time of the year (month / season)
→ Summer season will have higher price

* Middle price range: 85-115 % of Median value : \$ 382,500–\$ 517,500

Total listings	Mean	Median
21596	\$ 540,291	\$ 450,000

* King County housing sales data (2014-2015): Zip codes, Price, Sales time

1. Lively neighborhood: Number of neighbors

Lively / urban > 10000
Rural / quite < 2000

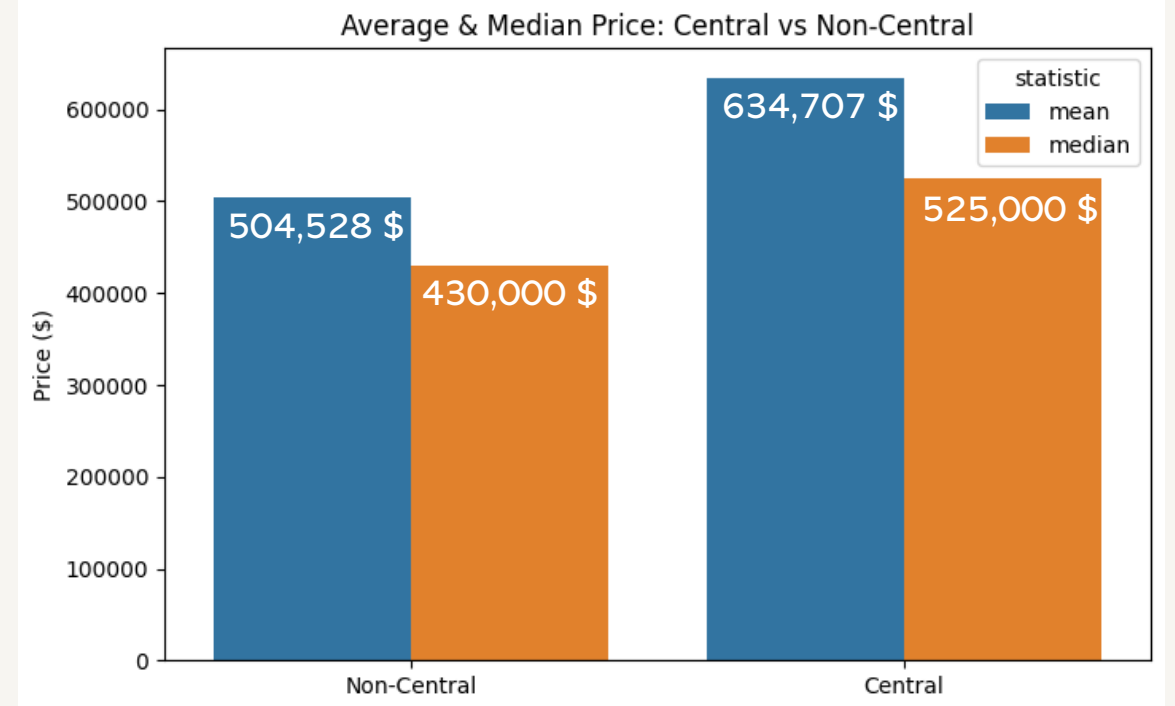

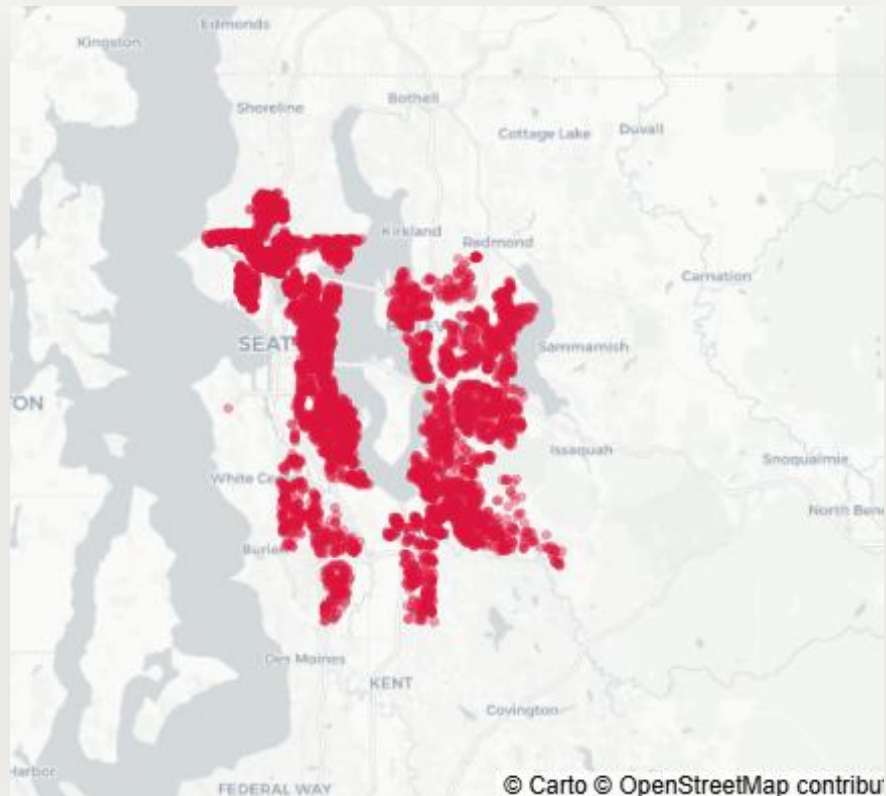

→ Not enough data to determine the density of the neighborhood

2. Central neighborhood:

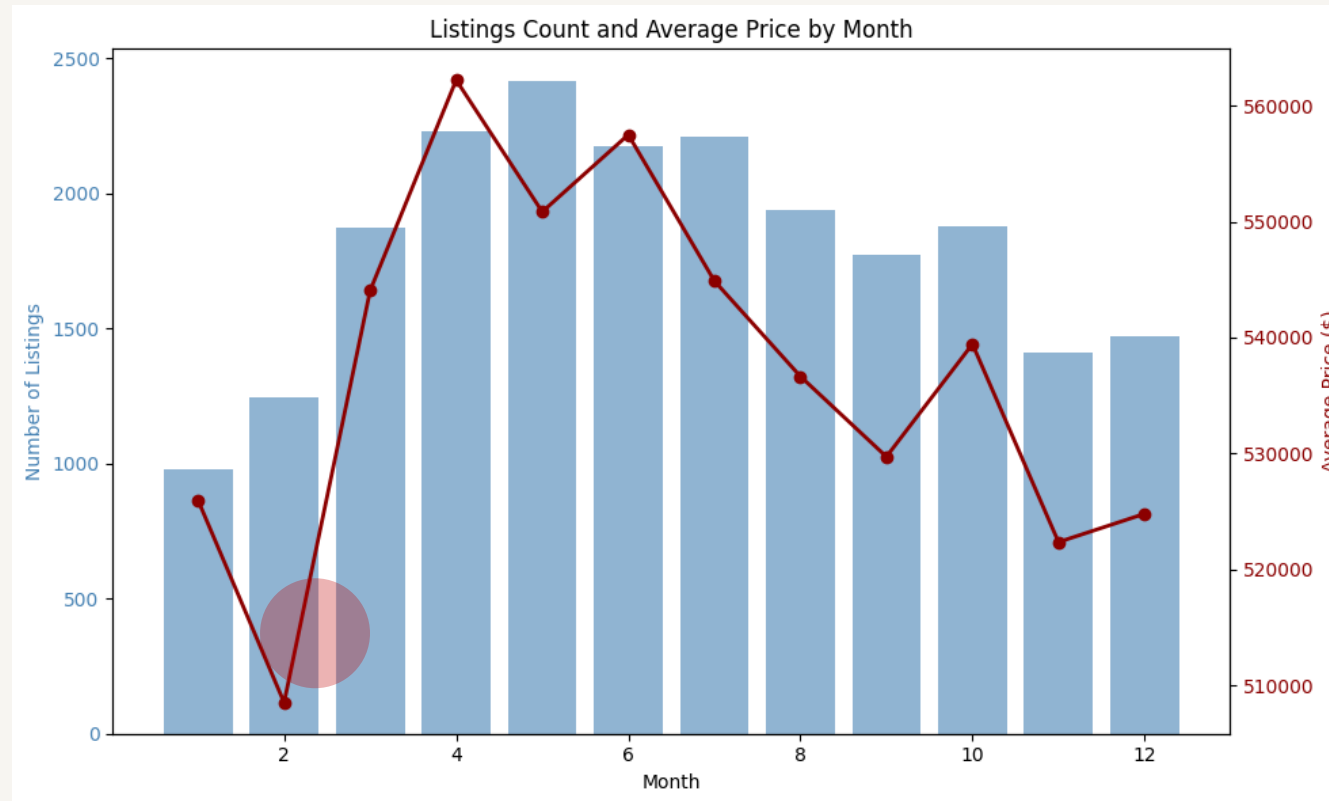

- Seattle (Western-central core)
- Bellevue (Eastside core)
- Renton & Tukwila (South-central core)

→ 25 / 70 zip codes, 5933 listings

→ Central > non-central (Nicole: \$ 382,500–\$ 517,500)

3. Right timing : Better price (+ Number of listings)

→ Autumn-Winter: Off-season (price, listing ↓)

→ February : Lowest price

Recommendations

Target central neighborhoods on the more affordable end

Central areas have a median price of \$525,000: just above Nicole's target range (\$382,500–\$517,500)

Shop in fall/winter, especially February

Prices and competition drop right before the spring peak season begins

Bottom line

By combining these two strategies, Nicole has a realistic path to finding a central, lively home within her budget within the next year!
